MEPCO is Growing!

For Immediate Release – January 6, 2012

Grand Rapids, MI – MEPCO is pleased to announce the addition of several new CNC mills and lathes to our growing machine shop over the past several months. This has allowed us to now purchase our brass forgings from a supply located in Michigan, giving us greater flexibility, quicker lead times and 100% USA-made parts.

Over the next six to twelve months MEPCO will continue to expand the machine shop with the purchase of several more key pieces of equipment. This will give us the means to better control quality, lead time and costs.
